

<b>Item Number</b>	4
<b>Title of Paper</b>	<b>Paper 1 - Activity Framework and Delivery Timetable</b>
<b>Decision or Information</b>	For decision
<b>Date of Meeting</b>	5 November 2019
<b>Presented by</b>	CPO – Joy Flanagan and Susan Ellison-Bunce
<b>Attachments</b>	Appendix A – Activity framework Appendix B – Draft phased work programme

## Summary

This paper provides the Board with an update on the development of the draft activity framework for Fire Standards, identified work in progress for Fire Standards development and some considerations of the priorities for Fire Standards development. There will be a presentation and explanation of the activity framework at the Board.

## Recommendations

The Board is asked to:

- Review and then discuss both the activity framework and the draft phased work programme
- Consider the priorities which may influence the work programme

## Decisions Required

The Board is asked to review the paper and appendices, if content, to agree for the CPO:

- to finalise the activity framework through further stakeholder engagement
- to complete the work programme for the Board to review at its next meeting
- to consider and confirm the Board's priorities to inform the CPO's work

## **Background Information**

### **Activity Framework**

The aspiration for the activity framework is to allow the Board and stakeholders to visualise the proposed scope of Fire Standards and guidance to be produced by showing the range of activities undertaken by fire and rescue services, irrespective of their governance arrangements, size, location or community demographics.

A first draft of the activity framework was shared with Board at the last meeting. Since then the CPO have engaged with a number of stakeholders, but primarily with fire and rescue services, and have collated feedback.

This feedback has been considered which has led to the evolution of the current version of the framework which can be found in **Appendix A**.

Whilst the activity framework is presented in document format, it is envisaged the framework, once agreed, will be an integral part of the website. It will also act as a road map for all audiences to comprehend the status of Fire Standards being developed and those which are approved.

The framework is designed to be read from left to right with more strategic activities on the left moving across to service delivery on the right. The intention is that any proposal presented for consideration as a Standard could be aligned to an activity on the framework.

There are some principles that the CPO has followed in developing the framework:

- For it to provide a complete road map so we can see where we are going and what it will look like when we have finished
- For it to help to categorise guidance effectively (operational and non-operational), ensuring that any potential duplication is identified and rectified at the earliest opportunity
- For it to allow interdependencies or links to be more easily mapped as Fire Standards are developed
- For it to be easy to navigate for all audiences

## ***Item 4 – Paper 1***

Whilst the CPO has done as much as it can to ensure the framework is comprehensive, based on experience of the National Operational Guidance Programme, the activity framework will evolve and develop in a controlled manner. This is expected to be iterative as work progresses on Fire Standards development.

It is important to recognise that not all areas may warrant a specific, stand-alone Standard. Also, in some areas there may be multiple levels or tiers of Standard as indicated with the different colours on the framework.

### **Phased Work Programme**

As previously discussed, it is envisaged the Fire Standards will be underpinned by guidance, supporting information and implementation tools. These will be produced in conjunction with subject matter experts drawn from the services through the NFCC improvement programmes and the network of NFCC national practitioner groups, as well as from other stakeholders and external consultancy, where appropriate.

In developing the framework, the CPO has been identifying and verifying the areas where previously developed guidance already exists or where work is in progress to develop new guidance. Where this is the case the activity is marked with an asterisk.

Not all current or planned work has been identified as yet but the CPO is continuing to clarify this through engagement with the broad range of NFCC committees and groups.

From the information gathered so far, the CPO has started to collate the foundation of a phased work programme which can be found in Appendix B.

Matching both Board priorities alongside areas where guidance already exists or is in progress will allow the CPO to confirm timings around the phased work programme at the next Board.

The Board is asked to review and then discuss both the activity framework and the draft phased work programme.

## **Item 4 – Paper 1**

### **Prioritisation**

A range of considerations which may influence priorities have been shared with the Board at previous meetings. This has included the results of the original Professional Standards Body project's (PSB project) research along with the themes emerging from the first tranche of HMICFRS' inspection findings.

The Board is reminded to consider the HMICFRS' recommendation published in the [Summary of Findings from Tranche 2](#) report which includes reference to the Fire Standards Board on page 9.

Below is a reminder of the considerations shared previously. It should be noted that the themes from the HMICFRS may be influenced by the release of the HMICFRS' third tranche inspection report and the State of Fire report which are both expected in December 2019.

### **Proposed Priorities for Professional Standards from the PSB Project**

Based on the results of a survey into the standards in use by fire and rescue services currently, the PSB Project team proposed broad areas of priority. These included:

- Strategic deployment of fire and rescue service resources based on risk
- Prevention of fires and other emergencies
- Protection of people and property from fires and other emergencies
- Response to fire and other emergencies
- Business continuity and resilience to fires and other emergencies
- Workforce development within fire and rescue services

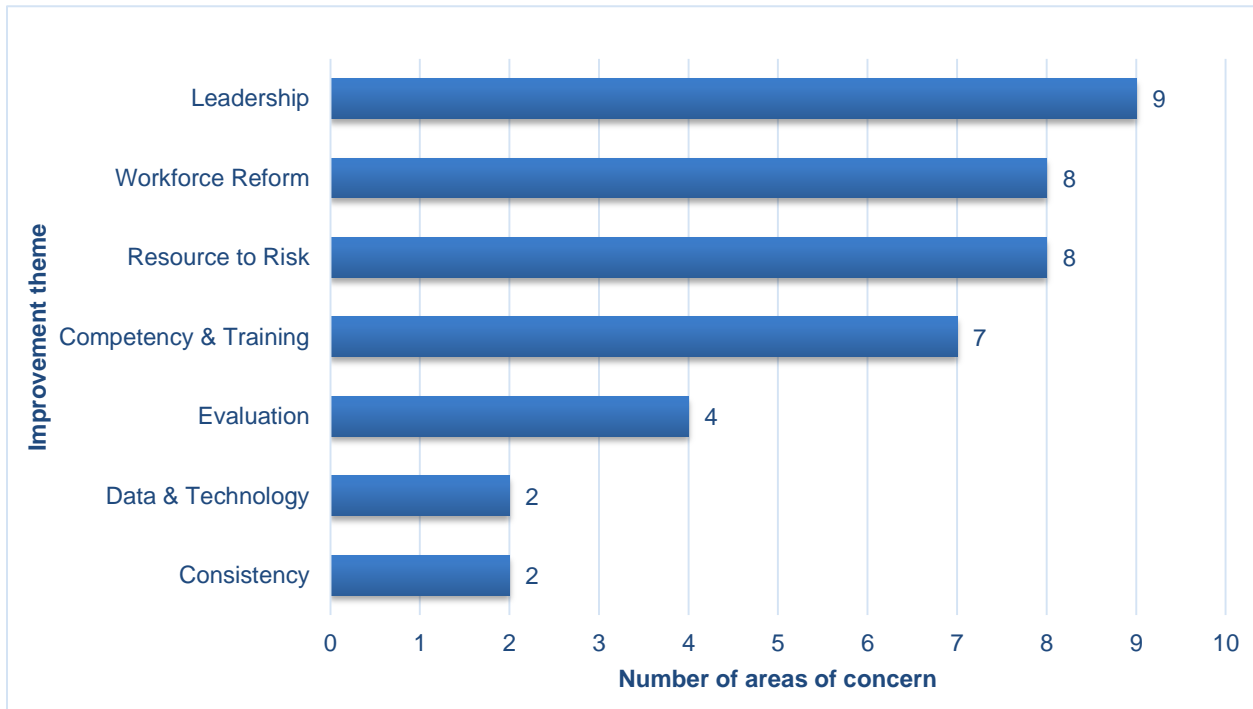

They also considered the levels at which standards might apply:

- **Organisational**  
Expectations that require contributions from different parts of the organisation
- **Functional**  
Expectations of particular functions or specialisms within each organisation
- **Individual**  
Expectations of individuals carrying out specific roles

**Item 4 – Paper 1**

**HMICFRS’ Findings**

On behalf of the NFCC, the CPO undertook an analysis of the currently published HMICFRS’ inspection findings from tranches one and two. The chart below shows the number of areas of

*Figure 1 - Source - NFCC Strategic Improvement Model Analysis*

concern grouped by improvement theme.

It is apparent that some areas of concern included in this analysis would be more appropriately addressed at a local level, but there are a number of areas where a national approach would be beneficial.

In these areas it is envisaged that the development of Fire Standards underpinned by guidance and supporting information would bring about a more consistent approach to service delivery resulting in more efficient and effective fire and rescue services.

As previously discussed with the Board, the NFCC has a national portfolio of improvement programmes underway, much of which is directly linked to addressing many of the areas highlighted by HMICFRS.

# APPENDIX B - DRAFT PHASED WORK PROGRAMME

The table below provides the Board with an early indication of areas of standards development work spread over three phases. These phases are not timed at this stage.

This is not a complete picture and further work is required to confirm and fully populate a timed work programme based on the activity framework. This will be facilitated by gaining confirmation across all activities in the framework to establish whether:

- Information exists already but may need review
- Work is underway but end dates and outputs need to be confirmed
- Work is planned but is yet to be fully scoped

Phase 1	Phase 2	Phase 3
Emergency response driving	Strategic & business planning	Financial (planning)
Operational response (NOG)	Corporate planning	Corporate risk (planning)
Workforce / People phase 1	Organisational learning	Organisational performance management
Communication	Community risk phase 2	Change management
Commercial activities	On-Call employees	Community Risk phase 3
Community risk phase 1	Ethics & values	Workforce / People phase 2
Home safety checks	Equality, diversity & inclusion	Workforce planning
Firesetters / Arson interventions	Leadership	Operational assurance
Road safety interventions	Health and wellbeing	Volunteers
Fire engineering	Workforce / People phase 2	
Fire safety audits	Data & digital	
Occupational Health	Data analysis	
Health & safety accident management	Procurement	
Incident command	Evaluation	
Pre-hospital casualty care	Safeguarding	
Operational learning	Vehicle extrication	
Local Resilience	Control Rooms	
	Interoperability
